1. Crime rate is the number of Criminal Code offences or crimes (excluding drugs and traffic) reported for every 1,000 persons. It is a better measure of trends in crime than the actual number of offences because it accounts for population differences. A high crime rate may indicate that a municipality is a "core city", i.e., a business and/or entertainment centre for many people who reside outside, as well as inside, the municipality. As a result, "core cities" may have large part-time or temporary populations which are excluded from both their population bases and their crime rate calculations.
2. Case loads are defined as the number of Criminal Code offences (excluding drugs and traffic offences) per authorized strength. They represent the workload per officer, and as a result, are often a better indicator of the demand for police services than either a jurisdiction's population or its crime rate. The case load is calculated by dividing the total number of Criminal Code offences in the calendar year by the authorized strength as of December 31st of the same calendar year.
